

VAIBHAV RAJPUT

Sales Engineer | Full-Stack Product Engineer

New Delhi, Naraina, India | vaibhavarya058@gmail.com | 8077893873 | [GitHub](#) | [Portfolio](#)

SUMMARY

Full-stack product engineer currently at THEIAKSHI, building production systems on the PERN stack (PostgreSQL, Express, React, Node.js/TypeScript). Independently designed and built THEIAKSHI ONE, a multi-tenant HRMS with a 35-table relational schema, backend RBAC, and Microsoft SSO, while also working as a Sales Engineer translating customer requirements into technical product solutions. Background in embedded/IoT engineering (Arduino, ESP8266) adds a hardware-aware perspective to product work.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, C/C++, HTML5, CSS3

Frontend: React, Vite, Tailwind CSS, Bootstrap 5, Responsive Design

Backend: Node.js, Express, REST API Design

Database: PostgreSQL, Relational Schema Design, Migrations, Referential Integrity, Parameterized SQL

Application Security: RBAC, JWT/Cookie Authentication, Multi-Tenancy & Data Isolation, CSRF/CORS, API Rate Limiting, OAuth/SSO (Microsoft Entra)

Embedded/IoT: Arduino, ESP8266, Embedded C/C++, Sensor Integration, Real-Time Telemetry

Tools & Infra: Git, GitHub, Docker, Docker Compose, Postman, Linux/Bash, CI/CD, VS Code

Practices: Technical Documentation, API Documentation, Integration Testing, PERN Stack Development

PROFESSIONAL EXPERIENCE

THEIAKSHI — Full-Stack Product Engineer & Sales Engineer — June 2026 – Present

- Independently designed and built THEIAKSHI ONE from the ground up on a 3-tier stack (React + TypeScript + Vite, Node.js/Express/TypeScript, PostgreSQL), replacing the company's legacy HRMS across employee management, attendance, leave, expenses, timesheets, work planning, assets, and reporting.
- Designed a 35-table relational schema with migrations, referential integrity, and parameterized SQL repositories; implemented organization-level multi-tenancy with branch- and department-scoped data isolation.
- Implemented HTTP-only cookie JWT authentication, database-backed session invalidation, backend RBAC, CSRF/CORS protection, API rate limiting, and Microsoft SSO (JWKS/RS256 validation, tenant checks).
- Built geofenced attendance, check-in/out regularization, and cross-day session handling; developed a weekly work-planning and timesheet module with XLSX export.
- Authored full technical documentation (system architecture, database schema, API reference, RBAC, deployment, troubleshooting) and built integration/regression test suites covering authentication, RBAC, attendance, and tenancy workflows.
- Containerized the stack with Docker Compose and added CI/CD, health checks, graceful shutdown, and automated backup/integrity-verification tooling for production readiness.
- As Sales Engineer, gather customer requirements for scientific and laboratory equipment (plant growth chambers, microscopes, hardness testers — Leica, Motic, Yateks) and translate them into technical product recommendations and after-sales support.

PROJECTS

FitZone Gym — Full-Stack Membership Platform github.com/keenu2004-ai/GYM-WEB

- Built a full-stack gym management platform (React + Bootstrap 5, Node.js/Express, PostgreSQL) with class booking and an admin dashboard, including the relational schema and SQL query layer connecting members, plans, and bookings.

PhonePe UI Clone — Unofficial educational recreation github.com/keenu2004-ai/PhonePe-Clone

- Recreated PhonePe's public website as a component-based React 18 + Vite application with React Router, covering 6 routes and pixel-accurate responsive layouts (320px–1920px) in vanilla CSS; frontend only, no backend or payment processing.

EMBEDDED / IOT ENGINEERING

- Solar PV Defect Detection — Built and deployed an ESP8266-based monitoring system using analog sensors and threshold-based fault identification, streaming real-time telemetry to a JSON/web dashboard.
- ArduMist (48-Hour Hackathon, Technopheilia) — Built an automated humidity-control device on Arduino UNO with a DHT11 sensor and relay-driven misting, implementing hysteresis control logic, a forced activation cycle, and an OLED display for live readouts.

SELECTED ENGINEERING STRENGTHS

- Full-stack ownership — translating a business workflow into frontend interfaces, backend APIs, database structures, and deployment configuration.
- Security-first implementation — authentication, RBAC, tenant isolation, CSRF/CORS controls, and rate limiting.
- Data-centric backend engineering — relational schema design, parameterized SQL repositories, migrations, and reporting/export workflows.
- Client-facing technical communication — gathering requirements and translating them into product and engineering decisions, from enterprise software to lab equipment.

EDUCATION

ABES Engineering College, Ghaziabad (AKTU) 2022 – 2026

B.Tech, Electronics & Communication Engineering — CGPA: 7.2

Relevant coursework: Embedded Systems, Digital Electronics, Signal Processing, Data Structures, Microcontrollers

D.A.V. Public School 2021 – 2022

Class XII — 77.9%

D.A.V. Public School 2019 – 2020

Class X — 77.8%
